Art Unit: 1623

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Singer et al.

Singer et al disclose the claimed ethanolate of azithromycin in the form of powder and suspensions for oral administrations (column 3, lines 23-27).

Art Unit: 1623

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Karimian et al (U.S. Patent No. 6,245,903) in combination with Singer et al (U.S. Patent No. 6,365,574).

Karimian et al disclose that azithromycin monohydrate isopropanol clathrate may be used in formulations of the drug product as tablets or capsules with excellent stability profiles (column 3, lines 26-30) but do not disclose said compound in the form of a powder for oral suspension. However, since Singer et al disclose a loosely analogous ethanolate of azithromycin in the form of powder and suspensions (column 3, lines 23-27), a person having ordinary skill in the art at the time the instant invention was made would have been motivated to prepare the compound disclosed by Karimian et al in the form of a powder for oral suspension because the results obtained from such a preparation would have been expected.
